CAREER OBJECTIVE

Aspiring Software Engineer who enjoys turning ideas into real products. Looking for an opportunity to build reliable software, solve meaningful problems, and grow alongside a team that values ownership and continuous learning.

EDUCATION

Reva University

B. Tech in Information Science – 8.17 CGPA

Bangalore, Karnataka

Sep 2023 – Nov 2027

St. Clare's PU College

PCMC – 91 Percentile

Bangalore, Karnataka

June 2021 – Mar 2023

PROJECTS

NETRA | [GitHub](#) | MQTT, Node.js, FastAPI, Python, Next.js

May 2026

- Architected for distributed battlefield IoT monitoring – built real-time telemetry pub/sub system using Aedes MQTT broker, tested end-to-end across nodes within a 24-hour hackathon build.
- Achieved ~2s end-to-end telemetry latency broadcasting GPS, vitals, and threat data at 30s intervals across distributed nodes.
- Developed offline voice processing pipeline using FastAPI + Vosk/Piper, enabling communication without internet dependency.
- Implemented WebSocket MQTT bridge and HTTP polling API for seamless real-time audio response.

HelScan | [LIVE](#) | MongoDB, React, Express, Cloudinary, PDF Generation

Feb 2026 – Present

- Launched a real-world emergency identification product for riders – QR-based instant access to medical and contact details, live with real users, architected on free-tier infra to support up to 50K users at zero hosting cost.
- Built and tested full-stack application with React, Node.js, Express, and MongoDB – validated secure data storage, retrieval, and QR scan flow end-to-end with real users on physical helmet stickers.
- Implemented QR generation and PDF-based helmet stickers for real-world deployment.
- Integrated Cloudinary for optimized image upload and client-side compression.

ShardPredict | [LIVE](#) | React, Express, Solidity, Ether.js, MongoDB, Shardeum

June 2026

- Built a decentralized prediction market platform enabling users to create markets and place bets using blockchain.
- Developed and deployed smart contracts with security mechanisms like ReentrancyGuard and CEI pattern.
- Integrated MetaMask wallet and Ether.js for secure transaction handling.
- Integrated Gemini API for AI-driven outcome verification on disputed markets – deployed live on Vercel.

TECHNICAL SKILLS

Languages: Python, JavaScript, C++, Java, SQL

Frontend: React.js, Next.js, HTML, CSS, Tailwind, Bootstrap

Backend: Node.js, Express.js, FastAPI

Databases: MongoDB, PostgreSQL

Blockchain: Solidity, Ether.js, MetaMask

Libraries: NumPy, Pandas, scikit-learn, NLTK, TensorFlow

Tools & Technologies: Git, Docker, Cloudinary, Claude Code

Methodologies: Agile, SDLC

CERTIFICATIONS

- Full Stack Web Development, Apna College
- Network Security, IBM SkillsBuild
- Introduction to Java, Scaler
- Introduction to Computer Networking, Simplilearn
- Getting Started with Hadoop, Simplilearn

ACHIEVEMENTS & LEADERSHIP

- Selected among 70 teams out of 7000+ registrations at NMIT Hacks – May 2026
- Class Representative for 4 consecutive semesters, representing 40+ students and coordinating with faculty on academic matters
- Led teams as team lead across 4+ hackathons, building functional prototypes under time constraints in AI and IoT domains
